Course Overview

A two-day applied course on using generative AI, structured prompts and governed workflows to research, create, optimise, distribute and measure SEO content across classic and generative search experiences.

Learning Outcomes

- LO1: Evaluate SEO and internet marketing strategies of a website.
- LO2: Manage keyword research in alignment with SEO objectives.
- LO3: Provide on-page SEO strategies and recommendations.
- LO4: Manage off-page SEO strategies and performance across multiple channels.
- LO5: Monitor Google Analytics and Search Console reports to evaluate SEO performance.

5:10 PM–5:30 PM	20 min	Course recap, Q&A and feedback	Briefing / discussion	Slides 136–143

Topic and Lab Breakdown

Topic 1 — Fundamentals of SEO and Generative AI • Slides 16–39

Lab 1 — Audit the EcoDesk Demo Website • Slide 37

Establish an evidence-based baseline for a fictional Singapore sustainable-office-products website before any AI-assisted changes.

- Output: Completed baseline audit, five-item priority backlog and preserved original website
- Acceptance: Every finding cites observable evidence, separates fact from inference, includes a verification method and maps to a business or user outcome.

Lab 2 — Design the SIGNAL AI SEO Strategy • Slide 41

Turn the baseline into a 90-day AI-assisted SEO strategy with outcomes, audiences, content priorities, controls and measurement.

- Output: 90-day SIGNAL strategy and governance page
- Acceptance: The strategy links each initiative to an outcome, source of truth, owner, approval gate, metric and rollback or review trigger.

Topic 2 — AI-Powered Keyword Research and Content Strategy • Slides 40–63

Lab 3 — Generate and Validate a Keyword Universe • Slide 61

Create a grounded keyword universe for EcoDesk from supplied first-party notes and synthetic planner/Search Console exports.

- Output: Validated keyword universe and topic-hub webpage
- Acceptance: No metric is AI-invented; every retained keyword has a source, intent, cluster candidate, validation status and business-fit rationale.

Lab 4 — Cluster Keywords and Build Content Briefs • Slide 65

Transform the validated keyword universe into a non-cannibalising topic cluster and three grounded content briefs.

- Output: Topic-cluster architecture and three approved content briefs
- Acceptance: Every keyword maps to one primary page, each brief has a distinct intent and information advantage, and internal links form a logical user journey.

Topic 3 — Creating SEO-Optimised Content with Generative AI • Slides 64–87

Lab 5 — Create a People-First SEO Blog Article • Slide 85

Use a staged prompt workflow to create an answer-first article from a verified brief and claim ledger.

- Output: Verified, edited SEO blog article with claim ledger
- Acceptance: Every material claim is supported or qualified, the page resolves intent, adds original operational value and passes the six-part AI content QA scorecard.

Lab 6 — Generate Image, Video and LinkedIn Assets • Slide 89

Prompt text-to-image and video concepts, write accessible metadata, and repurpose the blog into a LinkedIn post designed to earn attention and editorial backlinks.

- Output: Multimodal SEO asset pack and ethical LinkedIn distribution post
- Acceptance: Assets are relevant, accessible, rights-safe and evidence-aligned; the LinkedIn post offers standalone value and seeks earned rather than manipulated links.

Topic 4 — AI for On-Page SEO and Content Optimisation • Slides 94–117

Lab 7 — Generate and Implement On-Page SEO Meta • Slide 109

Generate metadata options from visible page facts, then implement HTML, internal links, image attributes and valid structured data.

- Output: Optimised static product page and metadata decision log
- Acceptance: Metadata is unique and accurate, visible content and JSON-LD agree, links work, images are accessible and no unsupported rating, price or guarantee is present.

Lab 8 — Optimise an Answer Page for Google AI Overviews • Slide 113

Create a clear, source-grounded page that can be indexed and understood by users and generative search features without relying on unsupported GEO hacks.

- Output: Answer-first guide and AI-feature eligibility checklist
- Acceptance: The page is indexable, resolves the main and follow-up intents with unique value, cites evidence and makes no guarantee of AI Overview inclusion.

Topic 5 — SEO Performance, Ethics and Continuous Improvement with AI • Slides 118–152

Lab 9 — Analyse Search Console and GA4 Data with AI • Slide 133

Use synthetic Search Console and GA4 exports to diagnose performance without confusing impressions, clicks, sessions, users or conversions.

- Output: Evidence-backed SEO performance review and experiment plan
- Acceptance: Every conclusion traces to supplied data, metric scopes are correct, alternative explanations are considered and the recommended test has a baseline and decision rule.

Lab 10 — Build a Governed Agentic SEO Workflow • Slide 137

Integrate the course into a capstone workflow that monitors, recommends and prepares changes while humans retain control of publishing and outreach.

- Output: Governed agentic SEO capstone and monitoring plan
- Acceptance: The workflow is evidence-bound, read-only by default, blocks high-risk autonomous actions, records decisions and demonstrates a successful stop/rollback tabletop.

Resources Required

- Laptop with modern browser and text editor
- Python 3 for the local static web server
- Course slide deck and Learner Guide
- One shared EcoDesk HTML/CSS/JavaScript website plus ten individual activity folders with prompts, tips, articles and synthetic data
- Internet access for the live EcoDesk demo and official source verification
- Open book: course slides, Learner Guide and approved lab materials only.
