

Sample Article - EcoDesk Workplace Sustainability Strategy

Training sample for fictional EcoDesk. Review and verify before real publication.

Quick answer

Turn the baseline into a 90-day AI-assisted SEO strategy with outcomes, audiences, content priorities, controls and measurement. The useful outcome is a clear, evidence-based page that helps a defined reader make a better decision.

Why this matters

Google permits appropriate use of generative AI but warns that scaled, low-value content created mainly to manipulate rankings can violate spam policies.

A practical framework

1. Define the audience, intent and desired action.
2. Gather current first-party data and authoritative guidance.
3. Use AI to generate options, clusters or drafts within constraints.
4. Verify claims, calculations, accessibility and source implementation.
5. Publish after human approval, then measure outcomes and guardrails.

EcoDesk example

EcoDesk has one marketer and one subject-matter expert. Management wants faster content production without publishing generic or unsupported environmental claims.

What to avoid

- Invented performance, certifications, reviews or environmental impact.
- Repetitive keywords that make the page awkward or misleading.
- Generic AI prose without original evidence or a distinct reader decision.
- Automated publishing, outreach or technical directives without approval.

Source and limitation

Primary learning source: <https://developers.google.com/search/docs/fundamentals/using-gen-ai-content>

This sample uses synthetic business information. It promises no rankings, traffic, rich results or Google AI-feature inclusion.
