

Sample Article - EcoDesk Content Plan and Topic Clusters

Training sample for fictional EcoDesk. Review and verify before real publication.

Quick answer

Transform the validated keyword universe into a non-cannibalising topic cluster and three grounded content briefs. The useful outcome is a clear, evidence-based page that helps a defined reader make a better decision.

Why this matters

Useful information architecture groups content by audience tasks and makes important pages reachable through descriptive internal links.

A practical framework

1. Define the audience, intent and desired action.
2. Gather current first-party data and authoritative guidance.
3. Use AI to generate options, clusters or drafts within constraints.
4. Verify claims, calculations, accessibility and source implementation.
5. Publish after human approval, then measure outcomes and guardrails.

EcoDesk example

EcoDesk can publish only one pillar page and two supporting articles this quarter, so duplication and weak business fit are expensive.

What to avoid

- Invented performance, certifications, reviews or environmental impact.
- Repetitive keywords that make the page awkward or misleading.
- Generic AI prose without original evidence or a distinct reader decision.
- Automated publishing, outreach or technical directives without approval.

Source and limitation

Primary learning source: <https://developers.google.com/search/docs/fundamentals/seo-starter-guide>

This sample uses synthetic business information. It promises no rankings, traffic, rich results or Google AI-feature inclusion.
