

Sample Article - EcoDesk Media Library: Green Office Visuals and Video

Training sample for fictional EcoDesk. Review and verify before real publication.

Quick answer

Prompt text-to-image and video concepts, write accessible metadata, and repurpose the blog into a LinkedIn post designed to earn attention and editorial backlinks. The useful outcome is a clear, evidence-based page that helps a defined reader make a better decision.

Why this matters

Images and video should be relevant, accessible and technically efficient. Social distribution can earn discovery and links, but manipulative link schemes remain prohibited.

A practical framework

1. Define the audience, intent and desired action.
2. Gather current first-party data and authoritative guidance.
3. Use AI to generate options, clusters or drafts within constraints.
4. Verify claims, calculations, accessibility and source implementation.
5. Publish after human approval, then measure outcomes and guardrails.

EcoDesk example

EcoDesk will launch the new guide with one original hero visual, a 45-second explainer and a LinkedIn post for SME operations leaders.

What to avoid

- Invented performance, certifications, reviews or environmental impact.
- Repetitive keywords that make the page awkward or misleading.
- Generic AI prose without original evidence or a distinct reader decision.
- Automated publishing, outreach or technical directives without approval.

Source and limitation

Primary learning source: <https://developers.google.com/search/docs/appearance/google-images>

This sample uses synthetic business information. It promises no rankings, traffic, rich results or Google AI-feature inclusion.
