

Prompt Pack - Lab 9: Analyse Search Console and GA4 Data with AI

Replace bracketed fields with verified inputs. Never paste personal, confidential, licensed or credential data into a tool without authority.

Prompt 1 - CONTEXT task prompt

Context: You support EcoDesk, a fictional Singapore sustainable-office-products business. Audience: [role]. Page/task: [page]. Brand facts: [verified facts only].

Objective: [one measurable outcome].

Necessary inputs: [paste source text/data with source and date].

Task steps: Analyse supplied Search Console and GA4 tables using the metric dictionary. Show calculations, evidence rows, alternatives, confidence and a testable next action.

Evidence: Cite the exact supplied row, page element or source for every material conclusion. Separate observation, inference and recommendation.

eXclusions: No invented metrics, rankings, citations, testimonials, prices, certifications, environmental benefits or legal claims. No keyword stuffing, link schemes or private data.

Template: Return findings/options, evidence, uncertainty, recommendation, human checks and acceptance checklist.

Prompt 2 - Adversarial quality review

Act as a critical SEO editor. Review intent, accuracy, originality, clarity, brand, accessibility, Google Search policies and the lab acceptance test. Return issue, severity, evidence, correction and reviewer decision.

Prompt 3 - Human approval summary

Prepare a change preview. Show affected files/fields, before/after meaning, evidence, limitations, tests, risks, rollback and an approve/revise/reject recommendation. Do not publish.

Field-tested prompt templates

Published templates from [AI Prompts for SEO Meta Tags & LinkedIn Posts \(Templates\)](#). Search Console impressions and CTR are the inputs; the rewrite is the testable next action.

Every template follows the same five-part skeleton - it is the skeleton, not the tool, that does the work:

Part	What it does
Role	Tell the model what it is ("you are an SEO copywriter"), which sets vocabulary and priorities.
Context	The page, audience, keyword and differentiator. The model cannot know your business; feed it.
Constraints	Character limits, banned phrases, tone rules. Constraints are what separate usable output from slop.
Format	Ask for a table or labelled options so the output drops straight into your workflow.
Guardrail	An explicit instruction not to invent facts, and to ask when information is missing.

Replace the [BRACKETED] fields with verified inputs before running any template below.

Template 1 - Rescuing a page with high impressions but low CTR

Pull the numbers from Google Search Console first - this prompt turns a reporting insight into a rewrite, which is the single fastest SEO win available to most sites.

```
Here is Google Search Console data for one page (last 3 months):

Query: [TOP QUERY] Impressions: [N] Clicks: [N]
CTR: [N]% Average position: [N]

Current meta title: [TITLE]
Current meta description: [DESCRIPTION]

The page ranks well but searchers skip it. Diagnose the likely reason
in 2 sentences, then write 3 alternative title/description pairs for
the same query: one leading with a number, one leading with the
outcome, one leading with a question. Max 60 / 155 characters.
```

What to check: The diagnosis is a hypothesis, not a fact. Ship one variant, wait three weeks, and compare CTR in Search Console before rolling the pattern out.

In this lab: Use the supplied synthetic Search Console rows only. Record the diagnosis as an inference with a stated confidence level and a three-week measurement window - never as a finding.

Pre-publish checklist

Whatever the prompt produced, it goes through the same 60-second review before it ships.

Check	Why it matters
Character/pixel limits verified in a real checker	Models miscount; Google truncates at pixel width, not characters.
Every number and claim confirmed true	Fabricated specifics are the most common AI failure - and the most damaging.
Primary keyword present and early	The one on-page signal a meta rewrite must never lose.
Reads differently from your last five outputs	Repeated AI phrasing across pages and posts is what "thin content" looks like at scale.
A named human edited it	Generation is a drafting step, not a publishing pipeline.

These templates are model-agnostic: the same wording works in ChatGPT, Claude, Gemini and Copilot.
